- Lower client support cost and improved client relationships

Ensure your success on the internet, with end to end web solutions that will do your business wonders! Let essential empower your business with web application development services that add value to your web presence and boost your business profitability!

ERP Development

Enterprise resource planning or ERP systems are software systems that are used for operations planning, administration and for optimizing internal business processes, including manufacturing, supply chain, financials, customer relationship management, human resources, and warehouse management. A typical ERP software will integrate (or attempt to integrate) all data and processes of an organization into a single unified system.

In the absence of an ERP system, a large company may find itself with many software applications that do not talk to each other and do not effectively interface. Tasks that need to interface with one another may involve: manufacturing, logistics, distribution, inventory, shipping, invoicing, accounting, marketing, human resources management and so on. Without the right ERP solution that integrates all of these systems, it can be a quite complicated system for a company to handle.

Logical Key specializes in ERP software development and develops high quality solutions for mid-size and big companies. Since ERP system is pretty complex software that should be deeply integrated in all business processes of an organization, we believe that this is not the place for general mass-market solutions and use individual approach to every project. ERP software developed with us is:

- Powerful - integrates all your business data and processes into one unified system.
- Customized - solution developed exactly for your business, considering all needs of your company.
- Secure - strong protection mechanisms to prevent both insider and outsider theft, such as espionage, abuse or sabotage of the information.
- Reliable - reliable data storage, processing, and backup mechanism to make sure you won't lose your information due to hardware failures.
- Easy-to-use - simple and intuitive interface will not distract you from your work and reduce adaptation costs.

- Alerts (In/Out) Optional

2- Web & Graphic Design

A professional and respectable outlook online is as important online as it is in print and digital media. To make sure that your web applications and websites leave a favorable impression on your client, recruit professional development companies, those who understand what users look for, and deliver. Inexperienced developers are seldom up to the task, as they lack the experience to predict all that could go wrong with an application. Anything online is exposed to, and hence used by a large demographic.

So when developing, we need to keep in mind all the restrictions users can face, and deliver an elegant design that is extremely usable. At Logical Key, we know from our experience what goes into a great web based application. We realize all the restrictions that can be faced by our clients and their users. as it stands, we already have several applications with professional, and practical designs that run light on both the client's and server's sides. Our developers understand the extent of user friendliness that goes into compiling a successful web front. Our clients have learnt to expect the same sort of developmental finesse that one expects in sites like Facebook and Twitter.

Our designers understand the level of detail that goes into making an elegant, competent and functionally practical design. It really is the fine tuning that makes all the difference. Working in collaboration with our clients, all the way through, our team guarantees customer satisfaction always. With regular updates, and an extremely interactive team to client communication front, we keep our customers involved and informed. Our team uses a situation specific approach to each project. We have extensive experience in HTML5, PHP, .NET, SQL, and many other widely used, proven technologies. All our finished work goes through a rigorous QA, to maintain a constant high standard.

3- Information Security

Logical Key Information Security supply services, which support our clients in identifying, managing and mitigating their Information Security risks. Our consultants are amongst the best in Europe, and are highly respected amongst their peers for their research. Work, identifying and mitigating new vulnerabilities in an increasingly complex threat landscape. Logical Key Info Security consultants are regularly invited to attend global technical forums to present the findings from their research.

We differ from other companies in that our consultants are experienced in translating complex threats and vulnerabilities into germane assessments of business risk.

This particular strength also sets us apart from our competitors in our ability to work with and communicate risk amongst board members, managers and technical staff alike.

Modern organizations are increasingly seeing Information Security as an enabler to business advantage rather than another unavoidable cost. Logical Key Info Security use this approach with all our clients whilst ensuring that we operate on your terms; such an approach provides returns of exceptional worth. We have an exceptional track record, particularly when handling high pressure, high profile incidents. Logical Key Info Security clients draw on our services not only because of our demonstrable expertise, but also because of the willingness and motivation of our consultants, account managers, and service managers to align themselves with your organization's objectives. In this way we are best placed to help you manage your risk to achieve greater control and return for your business.

Info Security Services

- Network Security Testing
- Application Security Testing
- Firewall Rule set Review
- VoIP Security Testing
- Wireless Security Testing

"We believe that technology is a key enabler for the development and prosperity of any individual, organization and society. Our role is to make this happen by leveraging our know-how, experience and the latest technological breakthroughs we can tap into."

Our approach is an engineering approach to systems integration and solutions design, focusing on cost effectiveness, quality and results.

Logical Key A Knowledge Driven Organization

Logical Key is based on knowledge sharing and collaboration enabled and enhanced technology. We continuously strive to further grow, maintain and disseminate state-of-the-art specialized knowledge about our business. Logical Key's consultants not only have professional knowledge and the ability to demonstrate high standing project and personal skills, but they also boast extensive experience in their respective fields of expertise. Logical Key's foremost important skill is the translation of enterprise wide business concepts into integrated working solutions.

Logical Key invests heavily in its primary asset: **people**, with their ideas, expertise, and experience. In order to enable and foster knowledge, Logical Key relies heavily on technology to improve experience, knowledge transfer and information sharing, speed up decision making, nurture a corporate culture of innovation and creativity, and enforce discipline to deliver with precision and quality. In addition to people, Logical Key also invests heavily in R&D and technology in general to ensure we are able to best serve our customers and consistently provide a leading edge in our technology integration services.

Strategy

Logical Key operates under a simple yet robust framework; combining quality, commercial efficiency and technical discipline and competence into a coherent, customer-centric model. We maintain a consistent approach to the way we conduct our business focusing on the core services and technology integration capabilities.

We achieve this by a set of principles at the highest levels and across the board. These principles govern all operation units' core processes. Thus, we are able to provide our customers with excellent service and high quality resources.

"Our strategy therefore is built around people we serve (our Customers), people we work with (our Partners) and people that entrust us (our Shareholders)."

We recognize that everyone is dedicated to retain full satisfaction by:

- Exceeding stakeholders' expectations
- Understanding customer needs, requirements and underlying motivations
- Offering a practical mix of reliable technologies and solutions
- Developing and leveraging our human resources expertise and capabilities
- Our commitment to continuously improving our value proposition and its underlying processes
- Valuing and fostering creativity and creative thinking by providing the right support and environment
- Working smart and mixing business with pleasure through serious play
- Operating under a results oriented work environment

- Creating a culture of belonging through giving our staff the Autonomy they need, help them master their subject matter and making sure we are all working for a purpose that is bigger than our direct business tactical objectives and ourselves
